

BREATHALYSER KEY MANAGEMENT SYSTEM

The intelligent key cabinet incorporating a built in breathalyser is a world class product, allowing companies to ensure that only sober individuals are taking keys that they have been granted access to and that they are sober upon return of the key. The key cabinets can hold anything from **20 to over 540 keys** depending on the requirements of the company. Time of removal, records of who has been in possession of the keys and what time the keys are returned are all available at the click of a button from a designated number of pc's. Whether on site or off site all the data is instantly available. The cabinet can keep records of mileage, expiry dates of licenses, odometer readings, accident reports etc. There are numerous other features and record keeping capabilities that are all easily controlled using the intelligent key cabinet.

SIMPLE OPERATING PROCEDURE!

The key cabinet is very easy to use. On screen instructions give step by step instructions to the user that are easy for anyone to follow.

FINGER PRINT IDENTIFICATION

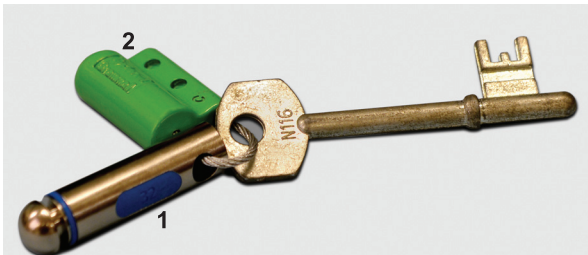

Employees are enrolled onto the system via fingerprint and pin code. depending on the specific user or key the user wants access to the employee may be instructed to blow into the breathalyser before it will give access to the key. The breathalyser function can also be required upon returning the key back into the cabinet.

KEY CABINET

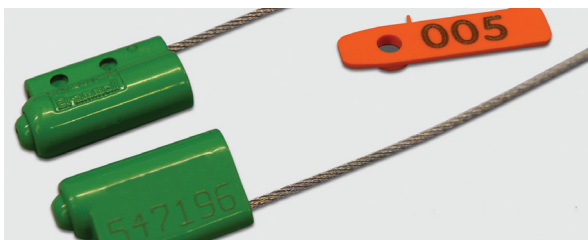

Once the user has been recognised the cabinet door will open and will highlight the key that the employee has access to by illuminating a green light above the key. Keys that the employee does not have access to will have a red light displayed above the key. The keys with a red light will not release even when pulled with force. The cabinet will record what time each key is taken and returned. access to the records will be easily available to a manager or owner via their pc.

A metal front door is also available.

KEY LOCK SECURITY TAGS

- 1 Each key ifob has an individual serial number which is automatically read by the cabinet to record the movements in and out of the cabinet.
- 2 The green metal security seal physically attaching the key to the ifob.

INDIVIDUAL KEY IDENTITY

Unique numbered Green metal security seals make sure that the key cannot be removed separately from the cabinet without the ifob.

Number tags can be added to the security seal to correspond with the key slot in the cabinet.
